

Introducing Kondor Vision

Manage the trade lifecycle from trade capture to post-trade operations and risk management in a new unified, modern, and intuitive workspace.

Comprehensive and dynamic front to back to risk coverage

The new Kondor user interface, Kondor Vision, supercharges the powerful capabilities delivered by the software. You can now access all of Kondor's key features in a single workspace that can be entirely designed and configured according to your preferences.

Having all your apps in one place takes efficiency and productivity to a new level. You no longer need to search for the right tools every day and launch them individually as this can be automated. And if it isn't, the search tool gets you to the module you need in moments.

Kondor Vision is all your apps in a workspace designed for you. You can now access all the Kondor applications from one launch menu. This menu also provides the tools to create, define and save workspaces. A workspace is a set of windows covering all the applications that you need and organized the way you choose. You can easily create, delete or share new workspaces according to your preferences.

Kondor is delivered with predefined workspaces set up for specific roles. You can use these as they are or modify them to tailor them to your needs.

The predefined workspaces include spaces for an FX Trader, Middle or Market Risk Officer, and Regulatory Risk Officer.

User focused design

- Advanced workspace management
- Easy to switch theme
- Desktop or browser mode

Advanced Dashboarding

- Dynamic charts
- Filtering, aggregation, and easy drill-down
- Customizable rendering and formatting

Unified Interface

- Single authentication
- Front to Back to Risk Reports
- Full Trade Lifecycle Monitoring

Best In Class Technology

- High performance data grid
- Real-time data updates

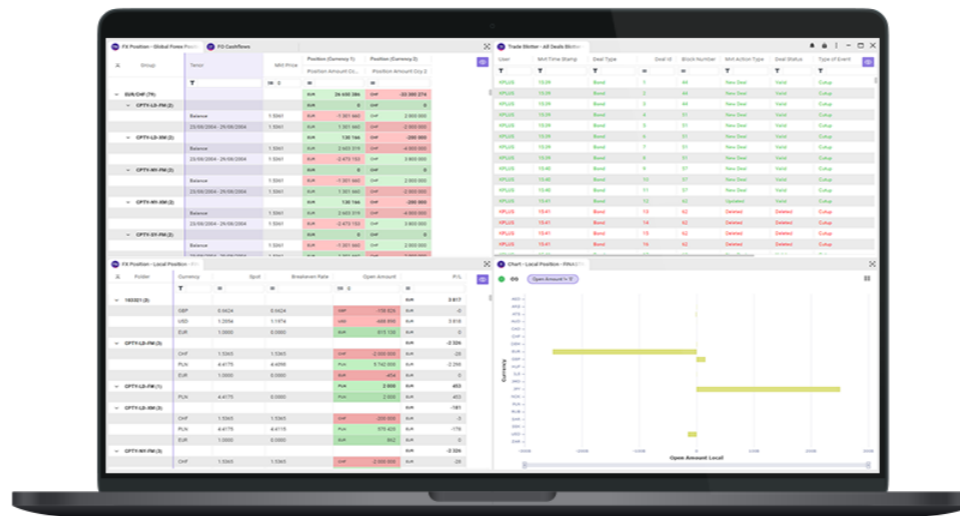

Kondor Vision goes beyond merely modernizing the user interface; it's about enhancing the user experience by presenting all relevant data in a meaningful way, empowering users to make informed decisions."

Marc Massé

Director, Product Management

Cutting edge reporting and dashboarding

As an FX Trader, your predefined workspace allows you to enter a trade and see your position updated in real-time, to always have an up-to-date view of your position and risk. You can also see your current P&L and Risk so that you can take appropriate actions such as hedging and requesting quotes.

Global Forex Position dashboard

Kondor reports and dashboards

Reporting is a key feature of nearly all the Kondor applications. The new user interface makes this very powerful feature surprisingly easy to use. It provides extensive ways to display and analyze data such as filtering, conditional formatting, or automatically calculated columns.

You can link charts to create a connection between the different tables. Reports are updated with end-of-day market data and trades by default.

You can choose to update them on request, incrementally, and in real-time. If you choose incremental updates, for example, all trading activity dynamically updates the reports.

Customize your results, actions and output

You can further customize your reports by applying formatting to data according to rules, creating new columns with custom calculations, and styling and sorting according to results.

Depending on the reporting application you are in, you have access to business actions from within the dashboard. Typical actions include trade contribution and the ability to open a trade ticket from the dashboard. More specific drill-down actions are also available from reports in other applications, such as SA-CCR.

The applications

All core Kondor modules are now operational, with some offering complete functionality. New applications will be introduced on a regular basis.

- Trade capture
- FX position
- Profit and loss
- Trade blotter
- Front office cashflow
- Custom reports
- Risk setup and limits
- Market risk
- Back office
- Credit risk
- SA-CCR
- Kondor reports
- Kondor limits
- Pre-deal credit limits
- DV01
